Barrax is simply another name for the borric acid â € â € œ which is the main ingredient that you need in your contact lens solution. Not all glue is the same. This recipe makes perfect sludge every time! Â € â € â € â €, super elastic, and with only 4 ingredientsâ € â € â € â € The homemade sludge is fun. Add Sal.If you are going with the initial test of two tablespoons, you will want about a salt spoon of salt. Check the list of ingredients and make sure that the borric acid is listed as one of the ingredients. Add water and food color (about 10 drops). Is your sludge super hard? Do not worry. Without a borric acid, â € ™ had become a sludge. These ingredients: Washing the coranite body mixing bowl mixing utensilary to water Once you have gathered your supplies, follow these steps: Add the body washing to the mixing bowl. If you are not sure how much you are hoping to do, start small. And who can blame them!? You can definitely make great sludge with it, but as â € ™ a slightly different glue, you may need to adjust the amount of water and activator you add to your mud. If you are worried about skin irritation or other effects, your child can wear rubber gloves. No, unfortunately, the contact lens solution is not safer than the Burax. Continue by adding small amounts of contact lens solution, kneading it in the sludge, until you are happy with the consistency and / or it stop sticking in your hands. And now, start having fun! Always keep your mud in a hermetic container for later use. use.
